SUMMIT

APPLICATION HOSTING

WE WORK HARD TO UNDERSTAND YOUR NEEDS TO CREATE A CLOUD ENVIRONMENT THAT'S OPTIMIZED FOR YOUR UNIQUE IT REQUIREMENTS.

Leverage our flexible cloud computing infrastructure to deploy innovative technology solutions that accelerate your digital transformation.

Access your critical applications and data securely from anywhere in the world. We host your licensed software on secure, private servers managed by experienced industry professionals so you can focus on growing your business.

- Sage Hosting
- Quickbooks Hosting
- Act! Hosting
- Tax Software Hosting

DEDICTED SERVERS FOR:

Sage   act!   qb   Microsoft 365 Business   + any other 3rd party application

SHARED VS. DEDICATED SERVER COMPARISON

Farm shared servers	VS	Summit's dedicated servers
Outdated & slow performance		Constantly updated, high-speed server performance
Not secure / susceptible to malware		Isolated data for industry-leading security
Unreliable environment		Overall better user experience
Printing issues		NO printing issues
Keystroke delay/inaccuracies		NO delays
Limited application hosting		Ability to host just about ANY application
NO admin rights		Full admin permissions
$60/mo per user		$55/mo per user

FAST FACTS

Data backups

We back up your entire server every night! And keep backups for 15-days free of charge, so that all of your software, company files and documents can be restored.

Available upgrades include:

- Geographical backups
- Personal server backups
- Longer backup repositories

Microsoft Office

O365 licenses for Enterprise, E3, E5, or Business Premium can be easily installed on your server(s) for free! O365 for Home & Business and Premium are not supported on terminal servers (the servers that all hosting providers use). Contact Microsoft directly to upgrade your account, or we can provide your Office license for $19 USD / $23 CAD a month/user.

Do you have a 3rd party connector?

We have servers with no inactivity timeouts to allow the applications to stay synced at all hours of the day. Even when no users are logged in. If you need an integrated app to run when you aren't logged in, our servers can allow for that to happen.

Printing

If a printer is connected to your device, that printer will auto map to the Summit server. You can then print immediately with no setup needed. You may also choose to install a 3rd party printer driver onto your server.

Onboarding

You will receive login instructions to your new server within 24 hours! After submitting the order form, your server will be built and any requested applications will be installed and ready to go!

Transferring company files and data to the server is very easy. We will provide you with simple tutorials, but our support team is always available to lend a helping hand if needed.

AWS and Azure hosting

AWS/Azure can provide you a dedicated server with admin rights. However, you are responsible for managing all security, backups, firewall, tech support, installation and anti-malware. Other AWS/Azure disadvantages include:

- Separate & unforecastable costs for bandwidth & usage
- Target for hacking
- Performance issues during peak hours
- Lack of security compliances
- Server technical support is an added cost

Partner Program

Along with perks such as the partner portal, partner dashboard, and a free demo server, direct and indirect partners save up to 20% with our partner program! Contact sales for more information today.

THE SUMMIT DIFFERENCE:

- 100% turnkey - set it & forget it!
- Security, backups, anti-malware all managed for you

- Zero downtime
- Time savings
- Decreased hardware & IT expenses

WHY SUMMIT?

We draw upon 20+ years of hosting experience to build dynamic cloud solutions that allow your business to grow and thrive. We take the time to learn about your business and understand your unique technology needs. Then, we build the customized solution you need to thrive. Our goal is to eliminate hassles and reduce risk for every one of our clients to empower you to pursue progress with confidence.

Protection from:

- Natural disasters
- Infrastructure failure
- Supply chain disruption
- Pandemics
- Ransomware

SECURITY IS OUR PASSION

AT SUMMIT, YOUR DATA SECURITY IS NON-NEGOTIABLE. THAT'S WHY WE PROTECT EVERY CLIENT WITH OUR MULTI-FACETED CYBERSECURITY WORKSPACE SOLUTION.

We build industry-leading security controls into every aspect of our infrastructure to ensure that your hosting environment is protected from unauthorized access. With Summit, security is never an "add-on" luxury; it's the foundation of everything we do.

Summit Secure Workspace combines a variety of industry-leading cybersecurity tools and practices that we use to keep your data and applications secure. Because we want to provide the most secure hosting services possible, every one of our clients receives these benefits automatically when they join us.

No catches. No hidden costs. Just world-class security.

24/7 Security Operations Team	**Automatic Updates**	**Patch Management**
Multi-Factor Authentication	**Zero Trust Framework**	**Network Segmentation**

Your data is your most important asset. That's why we implement a variety of cybersecurity tools and processes to protect your data and application workloads from threats that can disrupt your business and prevent you from making the most of emerging opportunities.

We leverage the industry's most trusted names in cybersecurity to ensure that our hosting services provide you with peace of mind and unmatched protection from cyberthreats.
