APPLICATION HOSTING FOR CPAS

As a hardworking CPA, you know the struggle: constant remote access to client data isn't just nice to have… it's mission critical. With Summit's secure application hosting, you can access your entire workspace from any device, any time, without the IT overhead.

Is Summit a good fit for your daily workflow? Use this checklist to find out:

- ☑ Still working on clients' QuickBooks files the old-fashioned way?
- ☑ Need more security and remote access from anywhere?
- ☑ Tired of clunky file sharing and limited access?
- ☑ Wish you and your clients could work in the same file at the same time?
- ☑ Want a solution that just works and doesn't require IT to babysit?

If you answered "yes" to any of these, Summit was built for you. We host your licensed applications on secure, private servers managed by real humans who get it. You get enterprise-grade infrastructure without the enterprise price tag.

Get firm-level visibility with client-level privacy

Summit gives your team full visibility into every client account, while each client can only see their own data. It's centralized control with individualized privacy — built for the way CPAs work.

Simplify your setup with Summit so you can focus on tax season, not tech support.
