

Cyber Readiness Checklist for SMBs

Most businesses find out how prepared they are the hard way: during an actual incident. These four questions cover the areas that determine whether a breach is a manageable disruption or a business-ending event. Check off what's true for your business today.

COVERAGE

- ☐ **Do you have cyber liability insurance in place?**
And do you actually know what it covers, and what it doesn't?

VISIBILITY

- ☐ **Has your environment had a vulnerability scan or security review in the last 12 months?**
You can't fix a gap you don't know you have.

PEOPLE

- ☐ **Has your team completed phishing or security awareness training in the last year?**
Most breaches still start with a click, not a hack.

RESPONSE

- ☐ **Do you have a written incident response plan, and has it actually been tested?**
A plan in a drawer isn't the same as a plan your team knows how to run.

How to Read Your Results

4
CHECKED

Strong foundation. Worth revisiting as your business and risk exposure grow.

2-3
CHECKED

Partial coverage. Some pieces are in place, but real exposure remains.

0-1
CHECKED

Significant gaps. An incident today would likely mean scrambling with no plan and no safety net.

Want a second set of eyes on where your gaps are?

Summit helps businesses evaluate their cyber readiness, uncover overlooked vulnerabilities, and prioritize practical improvements that strengthen security and support long-term resilience.
